

PROBLEM STATEMENT

1. The Handwritten digits are not always of same size, width, orientation and justified to margins as they differ from writing of person to person.
2. The similarity between digits such as 1 and 7, 5 and 6, 3 and 8, 2 and 7 etc. So, classifying between these numbers is also a major problem for computers.
3. The uniqueness and variety in the handwriting of different individuals also influence the formation and appearance of the digits.
